Executive summary

Where you stand right now, at a glance.

Executive Signature, in depth

Steady supporter

You move work forward with structure, ownership and steady follow-through.

Executive Edge: Deliberate pace

Executive Unlock: Test one more point of view

Your highest readiness facets are Orderliness and Self-Discipline (75 and 63). Your clearest area to develop is Intellect (38). Your most distinctive style facet is Activity Level (25).

Developing range across 6 readiness facets

You are dependable on most things. One area, often steadiness under pressure or finishing without being chased, slows you down.

Filled points count toward your score.
Hollow points describe your style, with no better or worse end.

2

Your profile in depth

How Steady supporter shows up day to day, under pressure, and in how you decide.

Steady supporter

Calm, dependable, loyal

Two people can share this profile and still lead differently. Your highest readiness facets are Orderliness and Self-Discipline (75 and 63). Your clearest area to develop is Intellect (38). Your most distinctive style facet is Activity Level (25).

Personal style

You bring a steadiness that other people notice even when you are not trying to. You would rather quietly support a colleague through a hard week than announce that you are helping, and you tend to trust relationships built slowly over time more than ones that move fast. Your calm is genuine, not performed, which is exactly why people find it reassuring.

Under pressure, you tend to focus outward, checking on the people around you before checking on yourself. New situations do not unsettle you much on their own, but a new situation where you do not yet know who needs support can leave you unsure where to direct your attention first.

Interacting with others

You are the person people go to when something is actually wrong, not just when they want an audience. You listen fully before responding, and you rarely need to be the one talking. That makes you trusted, but it can also mean your own concerns go unspoken longer than they should, since you are more practiced at asking others how they are doing than answering that question yourself.

People tend to trust you quickly with how they are actually feeling, even if they do not open up to others as easily. That trust is earned by consistency more than charisma, built through showing up the same way, meeting after meeting, rather than any single memorable moment.

Execution: Makes priorities, ownership and next moves easier to see.

Under pressure: Your Steadiness result shows how readily you keep judgment available when pressure rises.

Collaboration: Your Activity Level result contributes to your deliberate pace.

Leadership practice: Work on test one more point of view in one current situation.

Decision making

You weigh how a decision will land on the people affected by it as much as the decision itself, and you would rather take a little longer than get that part wrong. This makes your calls durable and well accepted, but it can also slow you down when a fast, imperfect call would have served the team better.

When a decision does not work out, you tend to look first at who was affected and how to repair that, before analyzing what went wrong strategically. This protects relationships, but it can mean the actual lesson from the mistake gets less attention than the relational cleanup around it.

Where you add the most

Tense moments and teams under strain. People calm down when you are in the room.

What to watch

You may carry other people's stress without saying so. Check in on your own load too.

People with a similar style

Satya Nadella

CEO, Microsoft

Known for a calm, empathetic style credited with steadying and rebuilding a company culture.

Melinda French Gates

Philanthropist and founder, Pivotal Ventures

Known for a steady, values-led presence behind major initiatives, not self-promotion.

Tim Duncan

Former NBA champion, San Antonio Spurs

Known as "The Big Fundamental," calm and team-first, avoiding the spotlight his whole career.

Public figures whose public style is often described this way. They have not taken this assessment. This is for reflection, not a claim about them.

Possible blind spots

Patterns you may not fully see from the inside, worth checking against how others actually experience you.

You may not realize how much emotional effort you are carrying for a team until it accumulates into real fatigue. Because supporting others feels natural rather than effortful, you may not notice the cost building until it is already significant.

Colleagues may also assume you are always available for support simply because you always have been, without recognizing that this is a choice you make repeatedly, not a bottomless resource. Naming the effort occasionally helps others see it as the real contribution it is.

3

Strengths and growth edges

Your two highest facets, and the two with the most room to grow.

Your top strengths

Orderliness

75

What it can look like: You keep your work organized, so others can pick it up and understand it.

Why it helps: Makes priorities, ownership and next moves easier to see.

Watch for overuse: Can spend too much time arranging the work before starting it.

Self-Discipline

63

What it can look like: You follow through on commitments without needing a reminder.

Why it helps: Keeps commitments moving when the work becomes repetitive or difficult.

Watch for overuse: Can leave too little room to reconsider a plan.

Your growth edges

Intellect

38

What it can look like: You may reach for the quick answer when a decision deserves another hour of thinking.

What it can affect: A narrow first view may hide a stronger option.

Try this: Ask for one alternative before settling on a direction.

Achievement-Striving

38

What it can look like: You may do what is asked and stop there. Picking one goal to push past is a good place to start.

What it can affect: Important work may move slowly when the target or next move is unclear.

Try this: Define the next visible result before you begin.

4

Working with others

What Steady supporter brings to a team, how they work, and how colleagues get the best from them.

Value to a team

What Steady supporter tends to bring to the people around them.

Calm under pressure

- Steadies a team during a stressful stretch just by being present.
- Rarely escalates tension, and often defuses it.
- Absorbs team stress without needing credit for it.

Reliable trust

- Builds trust that holds up under pressure, not just in easy times.
- Keeps commitments even when no one is checking.
- Creates psychological safety simply by being consistent.

Personal attention

- Notices when someone else is struggling before they say so.
- Gives quiet, consistent support that people come to rely on.
- Remembers what people are dealing with outside of work.

Your working style

Style facets describe how you work. No level is better than another.

Assertiveness

38

You tend to let others lead and step in when your view is needed.

Activity Level

25

You prefer a steady pace and doing fewer things well.

Cooperation

63

You avoid friction and work hard to keep things smooth between people.

Altruism

63

Lower

Higher

You go out of your way for others, often before they ask.

Communication guide

How colleagues and managers tend to work best with Steady supporter.

What works

- **Check in first:** Do not wait for them to raise an issue, ask directly.
- **Give them time to process:** A reaction now is worse than a good answer later.
- **Acknowledge the support, not just the output:** Name what they do for others.
- **Keep it calm:** A low-drama tone is how they communicate best too.
- **Ask what they need:** They are more likely to ask others first than themselves.

What to avoid

- **Do not assume calm means fine:** Check in anyway.
- **Do not pile on more:** Silence is not the same as capacity.
- **Do not rush a people decision:** Give them time when it affects someone they care about.
- **Do not mistake steadiness for no opinion:** Ask, they usually have one.

5

Next steps and appendix

Your five areas at a glance, what to try next, and how this report is built.

Your five areas, in detail

Ten facets in total: six contribute to your readiness score, and four describe your working style.

Follow-through Mid

58

Achievement-Striving

38

Self-Discipline

63

Orderliness

75

Steadiness Mid

50

Anxiety

44

Self-Consciousness

56

Curiosity Low

38

Intellect

38

Social energy Low

31

Assertiveness

38

Activity Level

25

Warmth High

63

Altruism

63

Cooperation

63

Suggestions for development

Ideas worth trying, drawn from your growth edges and profile.

Name your own workload

Say it out loud to someone this week, before it becomes too much.

Raise it early

Next time something bothers you, say so within a couple of days.

Ask to be checked on

Ask one person to check in on you the way you check in on others.

Practice one no

Say no to one request this month, even a small one.

Notice the cost of peace

Catch one moment when keeping it cost you something real.

Optional reflection: Which situation this month gives you a safe place to practise one of these moves?

These habits grow through practice and feedback from real work. The Think, Speak, and Act Like an Executive™ cohort gives you a place to build them. [See how the cohort works.](#)

How this report is built

The source

The full report selects 40 statements from the IPIP-NEO-120, an established, openly available personality measure built on the same five-area research tradition as the 20-question quick check (the short assessment page explains that tradition in full). Some statements run in the opposite direction, so their scores are reversed before a facet score is calculated.

How the score is built

Each of the 10 facets shown in this report runs on its own 0 to 100 scale, built from your own answers. Achievement-Striving, Self-Discipline, Orderliness, Intellect, Anxiety and Self-Consciousness average into the one readiness score on your executive summary. Assertiveness, Activity Level, Cooperation and Altruism describe your working style and sit outside that score on purpose, since neither end of a style facet is the better one. The shape on your summary page draws from the same five broad areas as the quick check, built here from these 10 facets rather than estimated from 20 broader questions.

Limits to keep in mind

- **Self-report:** This result comes from how you described yourself when you took the assessment. Mood, context and the impression you wanted to give can all affect an answer.
- **Scope:** This describes broad tendencies in how you work, not a diagnosis, and not a measure of intelligence, job performance or promotion potential.
- **No percentile:** UTL deliberately does not compare your result to a wider population. Comparing your own answers to each other says more about you than ranking you against other people would.

Read the full methodology, including the published source and what UTL added on top of it, at theuntaughtlessons.com/apps/readiness-assessment/how-it-works/.

Executive readiness

Put this report into practice

The Think, Speak, and Act Like an Executive™ cohort helps you practise the habits in this report with feedback from real work. Join the waitlist at theuntaughtlessons.com/programs.html to hear when the next cohort opens.
